Buenos días Denise,

We have had a busy week in the field, but very successful, in spite of a lock out for several hours by the striking teachers at the pozo escuela school. The FLUTe multiport systems were installed with no problems and passed the testing performed by FLUTe. We will do a full development of the ports before the monitoring well sampling.

Today the surveyors are at the site surveying the location and elevation of all the wells.

I was also just notified that DESA will accept all of our samples – that is really good news since we can minimize the number of bottles by consolidating some of the analyses into a single bottle. It also simplifies the shipping.

Have a great weekend.

Susan
